## API

### API overview

A REST/JSON API served by the Node backend. Base path `/api` (the apps proxy to it in dev). Auth tiers: Public no auth · **Consumer** JWT consumer bearer token (passkey/SIWE login) · **Admin** admin bearer token ( `requireAdmin` ) · Signed nonce one-time signed nonce · **Open** · **UI-gated** no backend auth yet, gated only in the UI (see hardening note).

### Auth & registration

| Method · Path                                       | Auth   | Purpose                                                          |
|-----------------------------------------------------|--------|------------------------------------------------------------------|
| GET <code>/api/auth/role?wallet</code>              | Public | Role probe → admin   merchant   none (no signature)              |
| GET <code>/api/auth/nonce?wallet</code>             | Public | Issue a one-time SIWE nonce                                      |
| POST <code>/api/auth/login</code>                   | Public | Verify signed nonce → 48h JWT                                    |
| GET <code>/api/auth/passkey/register-options</code> | Public | WebAuthn registration challenge                                  |
| POST <code>/api/auth/passkey/login-options</code>   | Public | WebAuthn login challenge (usernameless)                          |
| POST <code>/api/auth/passkey/login</code>           | Public | Verify assertion → consumer JWT                                  |
| POST <code>/api/register</code>                     | Public | New consumer: deploy Safe, idOS profile+credential, ENS, Pimlico |
| POST <code>/api/register/check-ens</code>           | Public | ENS subdomain availability                                       |
| POST <code>/api/register/recover</code>             | Public | Recover wallet after lost passkey (iOS-verified)                 |

### Consumer (wallet holder)
